CONSENSUS FORECAST

Issue 33,
2013

UKRAINE: PERSPECTIVES OF THE DEVELOPMENT (CONSENSUS FORECAST) is a publication by the Ministry of Economic Development and Trade of Ukraine (MEDT) prepared by the Department of macroeconomic forecasting with support of the United Nations Development Programme (UNDP) in the framework of the Acceleration of the Millennium Development Goals – Ukraine Project (AMDGP). It will be useful to the government officials, experts of central and local executive authorities, academia, representatives of public organizations, and everyone interested in the matters of the country's socioeconomic development and macroeconomic forecasting.

The publication contains materials presented during the seminar on macroeconomic forecasting held on 9 August 2013.

Seminars on forecasting aim to improve the quality of macroeconomic forecasts by means of expert discussions (of forecasts, current economic tendencies, results of research), achieving the consensus concerning the prospective vision of further ways of the country's development, and exchange information among major forecasting organizations (governmental institutions, international financial organizations, scientific research institutes, analytical centres, nongovernmental organizations, etc.).

The issue was prepared by:

Natalya Horshkova

Maksim Duda

Inna Mogilat

Sergey Bokun

Natalia Kovalenko

Natalia Sitnikova

Kateryna Kuritsyna

Tetyana Bolila

TABLES	27

Consensus Forecast is an "averaged" value of the most important forecast economic development indicators of Ukraine calculated on the basis of expert estimates provided by participants of the Consensus Forecast survey. The consensus forecast for 2013-2014 presented in the publication has been calculated on the basis of materials provided by the experts of the Ministry of Economic Development and Trade of Ukraine, GI "Institute of Economics and Forecasting of the National Academy of Sciences of Ukraine", Economic Research Institute, Institute of Economic Research and Policy Consulting, National Institute for Strategic Studies, Institute of Evolutionary Economics, G. M. Dobrov Center for Studying R&D Potential and Science History, Federation of employers of Ukraine, Taras Shevchenko National University of Kyiv, Representative of the International Monetary Fund in Ukraine, International Centre for Policy Studies, CASE Ukraine, Raiffeisen Bank Aval, The Bleyzer Foundation, Dragon Capital and FOREX CLUB in Ukraine.

The Consensus Forecast is based on the consultations and discussions with the experts. We would like to highlight that all the forecast indicators presented by the participants of the seminar are only independent expert estimates and not official forecasts of the relevant institutions.

We express deep gratitude to all the experts who participated in the Consensus Forecast initiative.

Table 1

MAIN MACROECONOMIC INDICATORS FOR 2007-2012

Indicator	2007	2008	2009	2010	2011	2012
Real sector, UAH mln						
Nominal GDP	720 731	948 056	913 345	1 082 569	1 302 079	1 408 889
Consumption	558 581	758 902	772 826	914 230	1 113 008	1 269 601
Investments	203 318	264 883	155 815	199 918	270 019	257 0335
Net export of goods and non-factorial services	-41 168	-75 729	-15 296	-31 579	-80 948	-118 047
<i>Index, year to year</i>						
Actual GDP	107,9	102,3	85,2	104,1	105,2	100,2
Consumption	113,6	110,1	87,8	106,4	111,1	109,6
Gross accumulation of the fixed capital	123,9	98,8	49,5	103,9	107,1	100,9
Exports of goods and services	103,3	105,7	78,0	103,9	104,3	92,3
Imports of goods and services	121,5	117,0	61,1	111,3	117,7	101,9
Inflation, index						
Consumer price index (annual average)	112,8	125,2	115,9	109,4	108,0	100,6
Dec. versus Dec. of the previous year	116,6	122,3	112,3	109,1	104,6	99,8
Producer price index (annual average)	119,5	135,5	106,5	120,9	119,0	103,7
Dec. versus Dec. of the previous year	123,3	123,0	114,3	118,7	114,2	100,3
External sector, USD mln						
Current account	-5 272	-12 763	-1 732	-3 018	-10 245	-14 761
Exports of goods and services	64 001	85 612	54 253	69 255	88 844	89 768
Imports of goods and services	72 153	99 962	56 206	73 239	99 001	-104 540
Foreign direct investments	9 218	9 903	4 654	5 759	7 015	6 627
External sector, USD mln

FORECAST OF MACROECONOMIC INDICATORS FOR 2015-2016 (AVERAGED)

A forecast of basic macroeconomic indicators for the period from 2015 through 2016 has been presented for the second time (Table 13).

In the medium term forecasting of macroeconomic indicators the experts have no common vision for the country development. Thus, significant differences in the forecast there are both in indicators and their components.

Consensus estimates for economic growth in Ukraine on average in the years 2015-2016 is 4.3%. But the difference between the minimum and maximum value quite significant - 2.5 percentage points (range from 3% to 5.5%).

Basically, it is assumed that the main lever of economic growth will be expanding private consumption: the average value of real growth in private consumption 7%. But this component variation is even more significant – 8.3 percentage points (from 4.2% to 12.5%).

According to experts rather modestly increase general government spending (consensus estimate of real growth in public consumption is 3.5%). But on this component specialists also have quite different estimates - a variation ranging from 1.7% to 6.4%).

Much of the uncertainty in the predictions is observed and the investment component - average rate of real investment demand is 6,3%, but the variation reaches 5,5 percentage points (from 2.8% to 8.3%). This indicates a different vision for the country in terms of modernization, improving scientific and technological potential and strengthen competitiveness.

For the price situation, the expert opinion here differs significantly. In general, experts predict maintenance of relatively low inflation in the medium term: the average forecast consumer price index and producer price index (annual average) of 106% and 109.7%. But the difference between the minimum and maximum predicted values is also significant – 3.6 percentage points (variation of the consumer price index from 104.6% to 108.2%) and 11.2 percentage points (variation of the index of producer prices from 105.5% to 116.7%), respectively.

No consensus can be seen in medium-term forecast estimates of foreign trade development. In particular, current account balance estimates vary between minus 2.8% to minus 6.7% of GDP. The averaged value of goods and services export growth is 7.1% (minus 3.3 – growth 11% variation), that for import being also 5.2% (minus 7.6 - 9.9% variation).

However, the parameters of the exchange rate policy relatively similar. Forecasts for average annual exchange rate of hryvnia to US dollar for 2015-2016 vary within 8.45-9.2 UAH/USD (averaged value being UAH/USD 8.79).

A less common position of experts also in the public sector: expected that budget spending will be greater than revenue in the medium term (averaged value of budget deficit is expected to be 2.6% of GDP for 2015-2016, maximal value being 3.3% of GDP).

Risks for 2013-2014

We offer you a consensus assessment of risks for 2013-2014.

The experts assessed the risks by 2 criteria: probability of realisation of a specific risk and impact of the risk on the economy of Ukraine.

The realisation of risks and their impact on the Ukrainian economy have been assessed according to the following scale:

Probability of occurrence realization estimates	Estimates of the occurrence impact on the economy of Ukraine
considerable probability (50-60%%) of risk display – 4; medium probability (30-49%%) of risk display – 3; moderate probability (10-29%%) of risk display – 2; small probability (under 10%) of risk display – 1; the risk is not probable – 0.	significant impact – 4; moderate impact – 3; small impact – 2; insignificant impact – 1; no impact – 0.

Based on the materials provided, an integral estimate of risks was calculated as a sum of occurrence probability estimates and occurrence impact on the economy of Ukraine weighed by the number of respondents.

Risks for 2013 were estimated for the fifth time whereas risks for 2014 were estimated for the second time. The highest possible consensus estimate of foreign and domestic risks has the integral estimate 16.

It is **foreign** risks that have appeared among leading ones **in 2013**: *deficit of external funding and shrinkage of possibilities of access to the international capital markets and failure to obtain planned financing from the IMF (integral estimate 12), curtailing of investment plans by foreign companies or postponement of their realization terms for future period, deterioration of external economic conjuncture: recurrent landslide of prices at the world raw materials markets (integral estimate 11), increasing the debt crisis in euro area (integral estimate 9).*

At the same time, despite the Ukrainian economy's significant dependence on external factors, the latter's impact on the domestic market situation, increased expert opinions on the probability of internal risks.

The highest integral estimate (14) among **domestic risks of 2013 year** has been given to: *significant growth in the state budget deficit and cash gaps of the Pension Fund, other state social insurance funds and Naftohaz Ukrainy NJSC.* Rather high position has been occupied by risks associated with *strengthening of devaluation tendencies at the monetary market, remaining low credit activity of commercial banks (integral estimate is 12).* At the same time, high integral estimate was given to: *expansion of the real economy's insolvency, carrying out considerable emission to finance the budget deficit (integral estimate 10).*

Among **foreign risks for 2014**, as for 2013, high integral estimate belongs to the risk of *deficit of external funding and shrinkage of possibilities of access to the international capital markets (estimate 11 for 2014), failure to obtain planned financing from the IMF (estimate 10 for 2014) and curtailing of investment plans by foreign companies or postponement of their realization terms for future period (estimate 11 for 2013 and 10 for 2014).* At the same time, expert's estimate of the risk of *deterioration of external economic conjuncture: recurrent landslide of prices at the world raw materials markets and increasing the debt crisis in euro area* decreased as of 2013 from 11 to 9 and 9 to 8 accordingly.

The risk of *significant growth in the state budget deficit and cash gaps of the Pension Fund, other state social insurance funds and Naftohaz Ukrainy NJSC* has the greatest integral estimate among **domestic risks for 2014** (integral estimate 13). Besides, the forecasters have high estimates (integral estimate 12) of such risks as *strengthening of devaluation*

tendencies at the monetary market, carrying out considerable emission to finance the budget deficit and remaining low credit activity of commercial banks (estimate 11).

So, among estimated domestic risks for 2014, risks in banking and budgetary sectors remain the most likely and influential.

Methodological explanations to Tables 2, 3, 9, 10, 11, 12 and 13:

The aggregated nominal values were calculated as a simple averaged value of the sum of the relevant indicators presented by all the forecasting organizations that participated in the Consensus Forecast survey.

In order to equalize the averaged (consensus) figures of the aggregated nominal values with the sum of their components, the averaged values of structural indicators (such as, for example, consumption and investments) were calculated indirectly with the help of parts of these components in the aggregated value. For example, if an average weight of consumption in GDP is known, then a nominal value of consumption is equal to the sum of this weight and the value of the averaged consensus GDP calculated as a simple average.

Indexes were calculated as a simple average of the sum of the relevant indicators presented by all the organizations.

The average values of the indicators being forecasted as percentage of GDP (particularly, indicators of the external sector and budget) were calculated as a ratio of the averaged nominal value of the indicator to the relevant average GDP value. The indicators forecasted in US dollars were calculated as a percentage of GDP on the base of averaged annual exchange rate.

Growth rates of the monetary aggregates within the forecast for 2013 (as of August 2013) were calculated as the ratio of the simple averaged nominal value from individual forecasted indicators presented by the participants to the actual value of the relevant indicator for 2012, and for 2014 – as the ratio of the simple averaged nominal value from individual forecasted indicators presented by the participants to the relevant forecasted indicator for 2013 year.

Average values of the current account balance were calculated as the sum of average values of the items of the account. Average values of budget deficit / surplus were calculated as a difference between the average values of revenues and expenditures.

During preparation of the consensus forecast, the organizations attending the seminar provided the following materials:

- forecast assumptions regarding an economic policy to be pursued in 2013-2014, and some quantitative exogenous parameters of development (presented in Table 4);
- forecast of the main macroeconomic indicators for 2013 and 2014;
- additional text explanations given by some organizations regarding forecast assumptions;
- expert assessment of risks for 2013-2014 (presented in Table 5, 6, 7 and 8).
