Ukraine: perspectives of the development

CONSENSUS FORECAST

Issue 32, 2013 **UKRAINE: PERSPECTIVES OF THE DEVELOPMENT (CONSENSUS FORECAST)** is a publication by the Ministry of Economic Development and Trade of Ukraine (MEDT) prepared by the Department of macroeconomic forecasting with support of the United Nations Development Programme (UNDP) in the framework of the Acceleration of the Millennium Development Goals – Ukraine Project (AMDGP). It will be useful to the government officials, experts of central and local executive authorities, academia, representatives of public organizations, and everyone interested in the matters of the country's socioeconomic development and macroeconomic forecasting.

The publication contains materials presented during the seminar on macroeconomic forecasting held on 5 April 2013.

Seminars on forecasting aim to improve the quality of macroeconomic forecasts by means of expert discussions (of forecasts, current economic tendencies, results of research), achieving the consensus concerning the prospective vision of further ways of the country's development, and exchange information among major forecasting organizations (governmental institutions, international financial organizations, scientific research institutes, analytical centres, nongovernmental organizations, etc.).

The issue was prepared by:
Natalya Horshkova
Inna Mogilat
Sergey Bokun
Natalia Kovalenko
Natalia Sitnikova
Kateryna Kuritsyna
Tetyana Bolila

Consensus Forecast is an "averaged" value of the most important forecast economic development indicators of Ukraine calculated on the basis of expert estimates provided by participants of the Consensus Forecast survey. The consensus forecast for 2012-2013 presented in the publication has been calculated on the basis of materials provided by the experts of the Ministry of Economic Development and Trade of Ukraine, GI "Institute of Economics and Forecasting of the National Academy of Sciences of Ukraine", Economic Research Institute, Institute of Economic Research and Policy Consulting, National Institute for Strategic Studies, Institute of Evolutionary Economics, G. M. Dobrov Center for Studying R&D Potential and Science History, Federation of employers of Ukraine, Taras Shevchenko National University of Kyiv, International Centre for Policy Studies, CASE Ukraine, Raiffeisen Bank Aval, UkrSibbank, OTP Bank, The Bleyzer Foundation, Dragon Capital and FOREX CLUB.

The Consensus Forecast is based on the consultations and discussions with the experts. We would like to highlight that all the forecast indicators presented by the participants of the seminar are only independent expert estimates and not official forecasts of the relevant institutions.

We express deep gratitude to all the experts who participated in the Consensus Forecast initiative.

FORECAST OF MACROECONOMIC INDICATORS FOR 2015-2016 (AVERAGED)

A forecast of basic macroeconomic indicators for the period from 2015 through 2016 has been presented for the third time (Table 11).

In the medium term forecasting of macroeconomic indicators the experts have no common vision for the country development. Thus, significant differences in the forecast there are both in indicators and their components.

Consensus estimates for economic growth in Ukraine on average in the years 2015-2016 is 4.1%. But the difference between the minimum and maximum value quite significant - 2.7 percentage points (range from 2.8% to 5.5%

Basically, it is assumed that the main lever of economic growth will be expanding private consumption: the average value of real growth in private consumption 5.7%. But this component variation is even more significant - 11.5 percentage points (from 1% to 12.5%).

According to experts rather modestly increase general government spending (consensus estimate of real growth in public consumption is 3.6%). But this component specialists follow a more or less unified point of view - a variation ranging from 2% to 6.4%).

Much of the uncertainty in the predictions is observed and the investment component - average rate of real investment demand is 0.6%, but the variation reaches 10.6 percentage points (from "minus" 2.3% to "plus" 8.3%). This indicates a different vision for the country in terms of modernization, improving scientific and technological potential and strengthen competitiveness.

For the price situation, the expert opinion here differs significantly. In general, experts predict maintenance of relatively low inflation in the medium term: the average forecast consumer price index and producer price index (annual average) of 105.2% and 107.2%. But the difference between the minimum and maximum predicted values is also significant - 7.8 percentage points (variation of the consumer price index from 100.4% to 108.2%) and 16 percentage points (variation of the index of producer prices from 100.7% to 116 7%), respectively.

No consensus can be seen in medium-term forecast estimates of foreign trade development. In particular, current account balance estimates vary between minus 2.8% to minus 6.7% of GDP. The averaged value of goods and services export growth is 7.7% (3.3-11.6% variation), that for import being also 5.8% (7.6-9.9% variation).

However, the parameters of the exchange rate policy relatively similar. Forecasts for average annual exchange rate of hryvnia to US dollar for 2015-2016 vary within 8.4-9.2 UAH/USD (averaged value being UAH/USD 8.8).

A less common position of experts in the public sector: the forecasters believe that budget spending will be greater than revenue in the medium term (averaged value of budget deficit is expected to be 2.4% of GDP for 2015-2016, maximal value being minus 3% of GDP).

Risks for 2013-2014

We offer you a consensus assessment of risks for 2013-2014.

The experts assessed the risks by 2 criteria: probability of realisation of a specific risk and impact of the risk on the economy of Ukraine.

The realisation of risks and their impact on the Ukrainian economy have been assessed according to the following scale:

Probability of occurrence realization estimates	Estimates of the occurrence impact on the economy of Ukraine
considerable probability (50-60%%) of risk display – 4;	significant impact – 4;
medium probability (30-49%%) of risk display – 3;	moderate impact – 3;
moderate probability (10-29%%) of risk display – 2;	small impact – 2;
small probability (under 10%) of risk display – 1;	insignificant impact – 1;
the risk is not probable – 0.	no impact – 0.

Based on the materials provided, an integral estimate of risks was calculated as a sum of occurrence probability estimates and occurrence impact on the economy of Ukraine weighed by the number of respondents.

Risks for 2013 were estimated for the fourth time whereas risks for 2014 were estimated for the first time. The highest possible consensus estimate of foreign and domestic risks has the integral estimate 16.

It is foreign risks that have appeared among leading ones in 2013: failure to obtain planned financing from the IMF, deficit of external funding and shrinkage of possibilities of access to the international capital markets and curtailing of investment plans by foreign companies or postponement of their realization terms for future period (integral estimate 10), deterioration of external economic conjuncture: recurrent landslide of prices at the world raw materials markets (integral estimate 9).

At the same time, despite the Ukrainian economy's significant dependence on external factors, the latter's impact on the domestic market situation, increased expert opinions on the validity of internal risks.

The highest integral estimate (12) among domestic risks of 2013 year has been given to: remaining low credit activity of commercial banks. Rather high position has been occupied by risks associated with significant growth in the state budget deficit and cash gaps of the Pension Fund, other state social insurance funds and Naftohaz Ukrainy NJSC and strengthening of devaluation tendencies at the monetary market (integral estimate is 10). At the same time, high integral estimate was given to: large-scale capital outflow caused by lack of stability at foreign financial and raw material markets and instability in Ukraine, substantial increase of natural gas prices for municipal heat and power engineering enterprises, substantial increase of natural gas tariffs for the population, expansion of the real economy's insolvency (integral estimate 9).

Among foreign risks for 2014, as for 2013, high integral estimate belongs to the risk of failure to obtain planned financing from the IMF (estimate 10 for 2013 and for 2014) and curtailing of investment plans by foreign companies or postponement of their realization terms for future period (estimate 10 for 2013 and 9 for 2014). At the same time, expert's estimate of the risk of curtailing of investment plans by foreign companies or postponement of their realization terms for future period and deterioration of external economic conjuncture: recurrent landslide of prices at the world raw materials markets decreased as of 2013 from 10 to 8 and 9 to 8 accordingly. At the same, for the year 2014 increased the integral estimate of the risk of retention of the tendency of accelerated prices increase at the world energy markets from 7 in 2013 to 8 (in 2012 November's issue the integral estimate was also increasing).

The risk of remaining low credit activity of commercial banks has the greatest integral estimate among domestic risks for 2014 (integral estimate 11). Besides, the forecasters have high estimates (integral estimate 10) of such risks as strengthening of devaluation tendencies at the monetary market, carrying out considerable emission to finance the budget deficit (estimate 9).

So, among estimated domestic risks for 2014, risks in banking and budgetary sectors remain the most likely and influential.

Methodological explanations to Tables 2, 3, 8, 9, 10 and 11:

The aggregated nominal values were calculated as a simple averaged value of the sum of the relevant indicators presented by all the forecasting organizations that participated in the Consensus Forecast survey.

In order to equalize the averaged (consensus) figures of the aggregated nominal values with the sum of their components, the averaged values of structural indicators (such as, for example, consumption and investments) were calculated indirectly with the help of parts of these components in the aggregated value. For example, if an average weight of consumption in GDP is known, then a nominal value of consumption is equal to the sum of this weight and the value of the averaged consensus GDP calculated as a simple average.

Indexes were calculated as a simple average of the sum of the relevant indicators presented by all the organizations.

The average values of the indicators being forecasted as percentage of GDP (particularly, indicators of the external sector and budget) were calculated as a ratio of the averaged nominal value of the indicator to the relevant average GDP value. The indicators forecasted in US dollars were calculated as a percentage of GDP on the base of averaged annual exchange rate.

Growth rates of the monetary aggregates within the forecast for 2013 (as of April 2013) were calculated as the ratio of the simple averaged nominal value from individual forecasted indicators presented by the participants to the actual value of the relevant indicator for 2012, and for 2014 – as the ratio of the simple averaged nominal value from individual forecasted indicators presented by the participants to the relevant forecasted indicator for 2013 year.

Average values of the current account balance were calculated as the sum of average values of the items of the account. Average values of budget deficit / surplus were calculated as a difference between the average values of revenues and expenditures.

During preparation of the consensus forecast, the organizations attending the seminar provided the following materials:

- forecast assumptions regarding an economic policy to be pursued in 2013-2014, and some quantitative exogenous parameters of development (presented in Table 4);
- forecast of the main macroeconomic indicators for 2013 and 2014;
- additional text explanations given by some organizations regarding forecast assumptions;
- expert assessment of risks for 2013-2014 (presented in Table 5, 6 and 7).
